

I wish to register my support for satellite radio. I swiched to XM several months ago because of the poor selection of local radio stations in my area. I encourage the FCC to support innovative technologies and broadcasting mediums to bring greater choice to the public. I urge you to reject the NAB petition 04-160.

Satellite radio has grown because of the selection of stations and choice it offers to consumers. This is no different that satellite tv offering local channel. American consumers demand it.
